Professional Finger Joint Bit

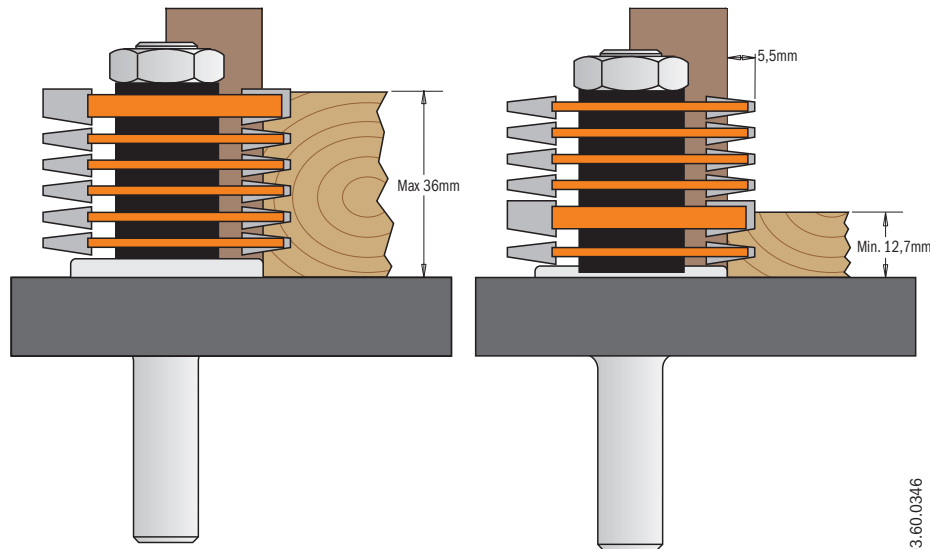

This versatile finger joint bit is the perfect tool for making incredibly strong side-to-side or end-to-end joints in wood and wood composites. The tightness and accuracy of the cut joint coupled with the maximum glue surface create a joint that is actually stronger than an unworked piece of wood. CMT's professional finger joint bit features two-flute design, carbide teeth and six removable cutters. This means you can make joints in a wide range of stock thicknesses - from 12,7mm (1/2") to 36mm (1-3/8"). Ideal for moulding manufacturers and furniture makers.

Drawings not to scale.
